

Name: _____
Date: _____
Period: _____

Mars

The planet Mars has been studied fairly extensively by NASA over the past decade. Here are some of the findings that have been made:

1. Mars has a very weak magnetic field.
2. Mars has no mountains other than volcanoes.
3. Mars has no rift valleys.

Using your knowledge about the earth, predict what a cross-section of Mars would look like. **Explain your reasoning.**
